Administrator Guide:

Upon reaching the root directory, navigate to the `admin` folder and execute `gradle clean build`. Once the build is successful, run `gradle run` to start the admin application.

Please sequentially import the school list, course list, and enrollment list. These files must be in CSV format. After completing the imports, you can manage existing courses, students, and professors using the functionality indicated on the buttons. Additionally, you have the option to click `clear database`. However, please be aware that this will erase all content from the database.
